1. About Kumuram Bheem (Asifabad District)

Kumuram Bheem District is carved out of erstwhile Adilabad District. It is surrounded by Adilabad, Mancherial, Nirmal districts and the Maharashtra state. Kumuram Bheem is being renamed as Komaram Bheem district after the legendary Gond martyr who was born in Ravte Sankepalli village near Kumuram Bheem.

Kumuram Bheem comprises 15 mandals and has two revenue divisions – Kumuram Bheem and Kaghaznagar. The district headquarter is located at Kumuram Bheem, a predominantly tribal town.

The railway line that connects the south and the north of India passes through Kumuram Bheem district. Sirpur-Kaghaznagar is a major railway station in the district. It has one RTC depot at Kumuram Bheem.

The district's primary crops include rice, cotton and pulses. Singareni Collieries, Sirpur Paper Mills, many spinning and ginning mills form the industrial profile of the district.

Historically, the district had a glorious past. Kumuram Bheem was an important part in the scheme of things of its erstwhile rulers. Fossils of the pre-historic period excavated in and around Kumuram Bheem attach archeological importance to this place. Vatti Vaagu project, Gangapur Cave, Movvad village are some of the tourist attractions. Vatti Vagu project is a medium Irrigation project being constructed across Vatt Vaagu, a tributary of Pedda Vaagu which is in turn a tributary of Pranahita river in Godavari basin.

2. Brief:

- Revenue Division : 2
- Revenue Mandals : 15
- Revenue Villages : 436

History: Kumram Bheem (22 October 1901 – 8 October 1940) was a tribal leader who fought for the rights of tribals over jal (water), jungle (forest) and zameen (land).

* Telangana chief minister K Chandrasekhar Rao announced that Adilabad district will be bifurcated and the new district will be named after tribal leader Kumram Bheem. Addressing a public meeting on the occasion of the 74th death anniversary of Kumram Bheem at Jodeghat in the district, KCR said the hillock in the village, where the leader died fighting the Nizam's forces, will be developed into a tourist spot. He said the government will build a memorial at a cost of Rs 25 crore on 100 acres. The memorial will be ready within a year.

AI

ARTIFICIAL INTELLIGENCE BASED LINE FOLLOWER ROBOT

Organised by Multipurpose Awareness Society ,Hyderabad ,Telangana
sponsor by:NMICPS ,DST,Govt of India

Artificial intelligence (AI)

Artificial intelligence (AI) is the simulation of human **intelligence** processes by machines, especially computer systems. These processes include learning (the acquisition of information and rules for using the information), reasoning (using rules to reach approximate or definite conclusions) and self-correction.

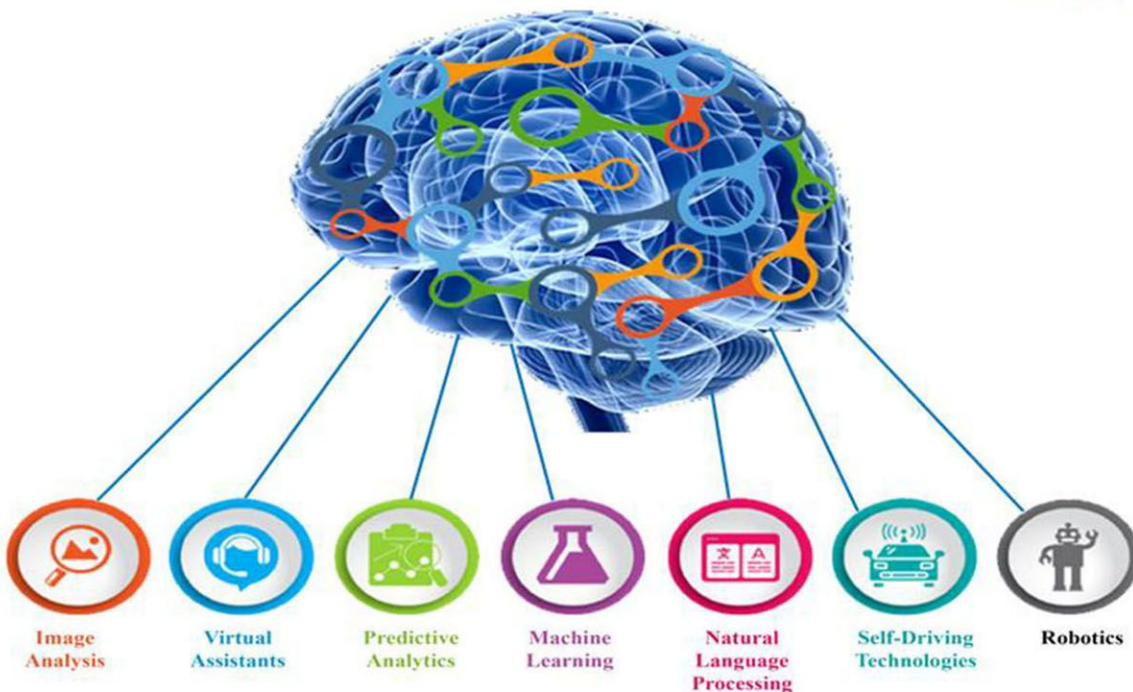

Robotics and artificial intelligence

Robotics and Artificial Intelligence. **Artificial Intelligence (AI)** is a general term that implies the use of a computer to model and/or replicate **intelligent** behavior. Research in **AI** focuses on the development and analysis of algorithms that learn and/or perform **intelligent** behavior with minimal human intervention.

Artificial Intelligence (AI)

AI encompasses developing intelligent learning algorithms. It is about how computer systems can simulate intelligent processes such as learning, reasoning and understanding symbolic information in context.

INTRODUCTION

- The line follower is a self operating robot that detects and follows a line that is drawn on the floor. The path consists of a black line on a white surface .
- A Robot is any machine which is completely automatic, i.e. it starts on its own, decides its own way of work and stops on its own. It is actually a replica of human being, which has been designed to ease human burden. It can be controlled pneumatically or using hydraulic ways or using the simple electronic control ways. The first industrial robot was Unimates built by George Devol and Joe Engelberger in the late 50's and early 60's.

WORKING

The IR sensor detects the light emitted by the transmitter, if the receiver receives light, the wheel of that side will keep on moving, as soon as the receiver stops receiving the light (black colour absorbs the light and thus no light is reflected so receiver cannot receive any light) the wheel of that side will stop.

❖For turning ,the robot stops 1 motor and runs the second to make the turn possible.

If the robot has to turn right then the motor on right side will stop and left motor will keep on running and thus allowing the robot to turn.

Components List:

- | | |
|------------------|----------------------------|
| 1. IR sensor | 9. 9volts |
| 2. Robot chassis | 10. Caster wheels |
| 3. BO Motor | 11. Small Zero PCB |
| 4. Wheels | 12. Lead and Soldering Rod |
| 5. Motor Driver | 13. Glue Gun |
| 6. Arduino uno | 14. Jumper Cables |
| 7. DC Jack(Male) | 15. Black sheet |
| 8. Battery Cap | 16. White Tape. |

Robotics

The definition of a Robot is a machine, especially one, that is programmable by a computer and capable of carrying out a complex series of actions.

In Automotive sector

Using for avoiding the exposure of humans to harmful chemicals and toxicity.

Humanoids

Robots which look like humans and are called humanoids. They can be used both at home and in industries.

(Sophia the robot gets a Saudi Arabian Citizenship)

APPLICATION

- ❖ Industrial automated equipment carriers.
- ❖ Automated cars.
- ❖ Tour guides in museums and other similar applications.
- ❖ Deliver the mail within the office building
- ❖ Deliver medications in a hospital.

ADVANTAGES

Robot movement is automatic.

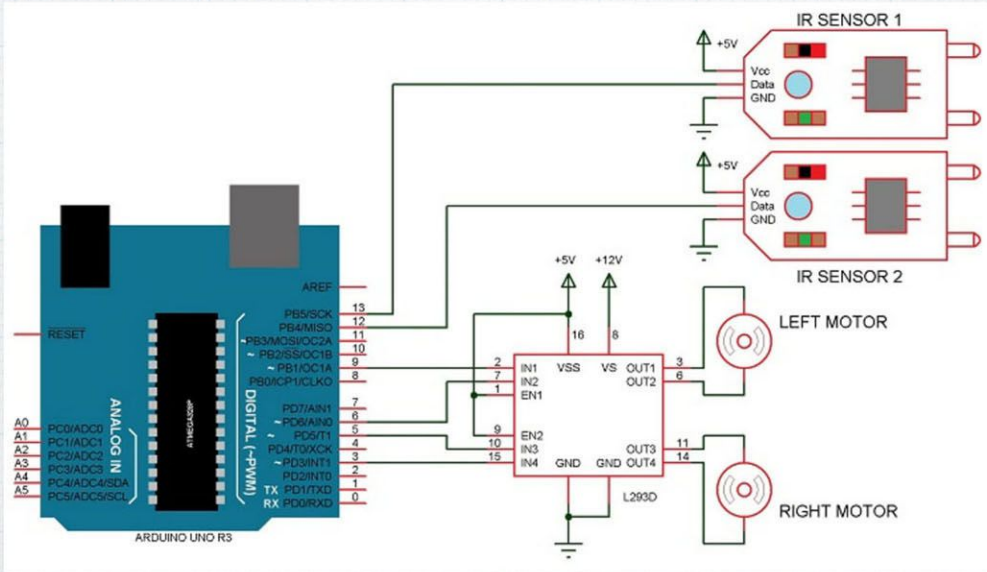

- ❖ Used for long distance applications.
- ❖ It is capable of taking various degrees of turns.
- ❖ Cost effective
- ❖ The color of the line must not be a factor as long as it is darker than the surroundings.

DISADVANTAGE

- ❖ LFR can move on a fixed track or path only.
- ❖ It requires power supply.
- ❖ Lack of speed control makes the robot unstable at times.
- ❖ Choice of line is made in the hardware abstraction and cannot be changed by software

Sensors (IR Sensor):

Sensors (IR Sensor): We have used IR Sensor Module as the line detecting sensor for the project. It consists of an IR LED and a Photo diode and some other components like comparator, LED etc.

FUTURE SCOPE

- ❖ Software control of the line type (dark or light) to make automatic detection possible.
- ❖ “Obstacle detecting sensors” to avoid physical obstacles and continue on the line.
- ❖ Distance sensing and position logging & transmission.

Arduino

Arduino is an open-source hardware and software company, project and user community that designs and manufactures single-board microcontrollers and microcontroller kits for building digital devices.

Interdisciplinary Cyber-Physical Systems (ICPS)

Nanotechnology

- Nanotechnology refers to manipulation of matter on an atomic, molecular and supramolecular scale, with the criterion being manipulation of matter with at least one dimension sized from 1 to 100 nanometers.

NanoTechnology in Fields Of Science

Interdisciplinary Cyber-Physical Systems (ICPS)

Communication Tech 5G/6G/7G

5G or the 5th Generation Telecom Network comprises three important features

- Greater speed
- Lower latency
- Ability to connect a lot more devices at once

6G or 6th Generation Network

- Cheap and Fast
- High data rates
- Fast Internet speed to access on air
- Data ranges up-to 11 Gbps

5G/6G/7G

7G or 7th Generation Network

- Space-roaming
- Ubiquitous Internet
- Rich multimedia data access
- Up-to-the-minute weather updates

Internet of Things (IoT)

➤ IoT is a system of interrelated computing devices, mechanical and digital machines, objects, animals or people that are provided with Unique Identifiers (UIDs) and the ability to transfer data over a network without requiring human-to-human or human-to-computer interaction.

EXAMPLES OF IOT DEVICES IN SMART HOME

Interdisciplinary Cyber-Physical Systems (ICPS)

Machine Learning

Machine Learning (ML)

Machine Learning or ML is an application of artificial intelligence (AI) that provides systems the ability to automatically learn and improve from experience without being explicitly programmed.

- It focuses on the development of computer programs that can access data and use it learn for themselves.
- The process of learning begins with observations or data, such as examples, direct experience, or instruction, in order to look for patterns in data and make better decisions in the future based on the examples that we provide.
- The primary aim is to allow the computers learn automatically without human intervention or assistance and adjust actions accordingly.

Cloud Server

Big Data

Big Data on the Cloud

Big Data refers to extremely large data sets that may be analyzed computationally to reveal patterns, trends and associations, especially relating to human behavior and interactions.

- Both humans, via, social networks and other channels and machines, through IoT or Internet of Things contribute to Big Data
- The cloud is a term referring to accessing computer, information technology (IT), and software applications through a network connection, often by accessing data centers using wide area networking (WAN) or Internet Connectivity
- Both Big Data and Cloud are a result of the fast growth of the Internet.

Simulated Objects

Interdisciplinary Cyber-Physical Systems (ICPS)

Virtual Reality (VR) and Augmented Reality (AR)

Virtual Reality and Augmented Reality are new exciting areas in which the real and virtual worlds are brought together.

➤ Using this technology, one can see, hear, smell and feel sensations as though one were in a real life situation, but actually the experience is via a computer simulation.

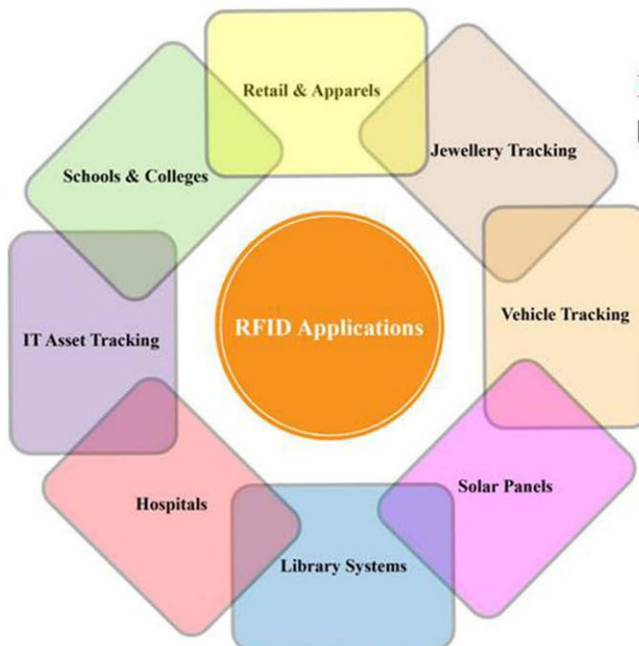

➤ With the help of special headsets, glasses and joysticks, one can get a 3D look and feel and enjoy an immersive experience.

➤ Flight Simulator that helps aspiring pilots with how to navigate a plane in real time and with simulations that help them learn how to handle an aircraft during times such as turbulence, engine failure or other emergencies.

Radio Frequency Identification (RFID)

RFID or Radio Frequency Identification helps establish the ID or identity of any object by the use of radio waves.

➤ RFID is better than other forms of scanning products

RFID or Radio Frequency Identification:

➤ Helps establish the ID or identity of any object by the use of radio waves

➤ Is used in supply chain, manufacturing, animal tagging, sports etc

➤ Is widely used in tracking goods, people and animals

Interdisciplinary Cyber-Physical Systems (ICPS)

Blockchain

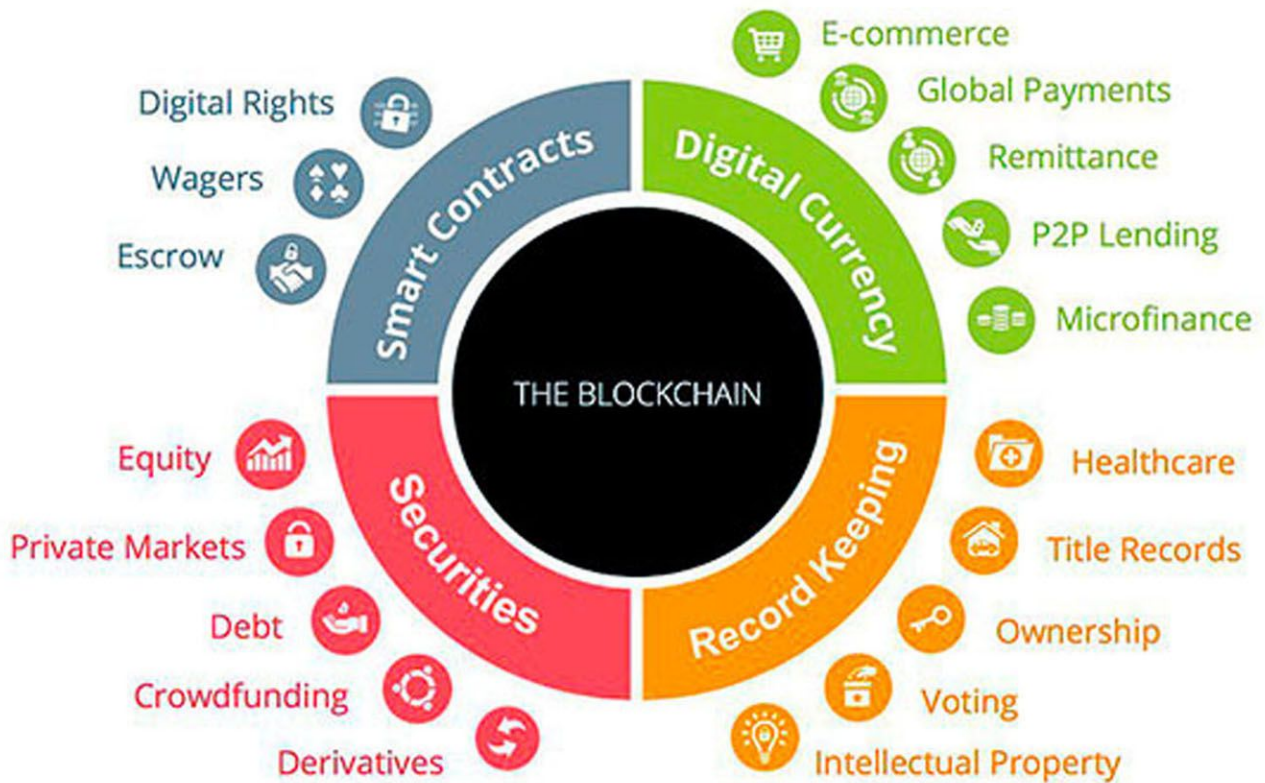

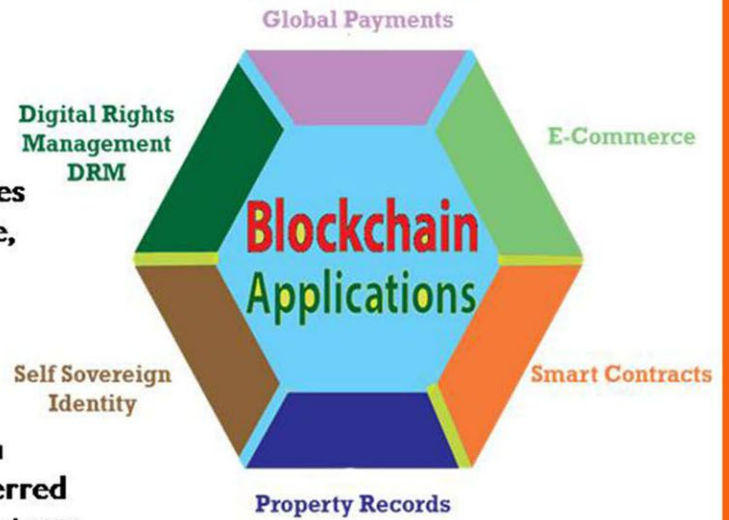

Blockchain is a technology that Protects user data with a high degree of privacy and security

➤ Is also an immutable record where a consensus algorithm works to ensure that valid changes to the data are made only by verified nodes on the network

➤ Can fundamentally alter many industries such as land records, supply chain, finance, medical field, education and more

➤ Also can use Crypto currency that can change the way money or value is transferred from person to person or business to business

Rural tribal school kids exposed to AI, robotics

Asifabad: Multipurpose awareness society organised free computer awareness programmes giving students a basic knowledge about artificial intelligence along with robotics, smart home for rural tribal school kids in Asifabad PHS School and Government Junior College, Komata Mandal during the whole month of June. The programme was attended by more than 400 rural tribal school students along with their teachers and school principal. The multipurpose awareness society has announced to conduct similar programs in 25 more schools in various

A wireframe human head and neck, rendered in a light blue color, is shown in profile, facing left. The background is a dark blue gradient with a grid of glowing white and light blue data points, creating a digital or futuristic atmosphere. A black hexagonal shape is overlaid on the left side of the image, containing the text "THE DREAM MACHINE" in white, bold, uppercase letters.
